ESRI Australia to open office in Darwin

Due to a growing strong demand for location intelligence solutions in the Northern Territory, ESRI Australia is pleased to announce it will open an office in Darwin in July. The office will provide a local base to deliver two major projects awarded via tender recently, as well as extend the company's solution offerings to existing clients in the Territory.

"I'm very excited about opening our seventh office, and look forward to offering an enhanced level of service to both our existing clients, as well delivering our new projects in the Northern Territory," said Brett Bundock, Managing Director, ESRI Australia.

"Having a Darwin base will also place us closer to expanding opportunities in the South East Asian region, particularly in relation to increasing interest in our location intelligence gateway Dekho."

With an initial focus on professional services, the office will expand over the coming months to offer the full range of ESRI Australia offerings.

"Whilst geographic expansion during the current economic climate may seem counter-intuitive, the demand we are seeing for location intelligence in the Northern Territory makes opening this office a very rational and easily justifiable decision," said Mr Bundock.

The Darwin office will be open by the end of July, with ESRI Australia's client conference roadshow, OZRI 2009, being held in Darwin on 31 August for ESRI Australia clients based in the Northern Territory.
