Dekho 3.0 takes performance and functionality to a new level

ESRI Australia is pleased to announce the release of Dekho 3.0, the latest version of the locally developed location intelligence gateway. Delivering an improved user experience through significant performance gains, Dekho 3.0 offers additional functionality, including mash-ups and editing capability.

With an enhanced architecture and certification against the recently released ArcGIS Server 9.3.1, Dekho facilitates faster communication protocols translated directly into performance gains.

Translating the features and functions of our successful location intelligence gateway EView, Dekho 3.0 delivers a number of new capabilities including virtual and exclusive layers, print to scale capabilities, TOC visibility configuration and multiple system coordinate readouts. Other new features include default maps and queries for role based access to information and map layers and improved automation of integration.

Thanks to the new performance enhancements delivered through the 3.0 release, Dekho's data retrieval and workflow performance is now even faster than ever before, delivering powerful decision making capabilities, system integration via an easy to use interface.

For more information about Dekho 3.0 and how it can enable your organisation to become truly location intelligent, visit www.esriaustralia.com.au/dekho_3.0 or email dekho@esriaustralia.com.au.
