Dekho set to take off in Asia Pacific

ESRI Australia's locally developed location intelligence gateway Dekho will be officially launched in the Asia Pacific region at the upcoming ESRI Asia Pacific User Conference.

As platinum sponsor of the user conference, to be held in Singapore on 20-21 January 2009, ESRI Australia will be showcasing Dekho to hundreds of conference delegates from across the Asia Pacific.

Dekho draws on ESRI Australia's long history of innovation, which began with the development of EView. Built on the ArcGIS Server platform, which is unparalleled in the marketplace, Dekho is the culmination of 13 years of continual product development.

With a short implementation timeframe and low risk deployment, Dekho delivers a location intelligence solution for information management and analysis requirements. A truly scalable solution, Dekho can be easily configured and centrally administered, while still offering the stability and confidence of a professionally developed technology.

Offering both Internet and intranet deployment, Dekho can service both internal and external customers. Dekho also has the ability to consume external web services, and can interact with applications sitting outside the corporate environment, ensuring true flexibility and compatibility.

Developed by a large team dedicated to technical innovation, Dekho is supported by a knowledgeable technical support team and more than 50 professional services consultants from around Australia.

The capabilities of Dekho will continue to grow with major releases planned throughout 2009.

For more information on Dekho, visit www.esriaustralia.com.au/dekho.
