

Jayne and Sam can see exactly the information they need

Using ESRI Australia's location intelligence gateway Dekho, Jayne and Sam have all the information they need to get through the day.

Jayne and Sam are like millions of other office workers, who need access to a wide variety of information from multiple sources throughout their day to get their jobs done. However, unlike many other employees, finding the information they're looking for is always a breeze.

Their secret? Jayne and Sam's organisation uses Dekho to bridge the gap between corporate databases, linking organisational information

together, using location as the common theme for integration.

Access to this information could not be simpler with Dekho, which delivers streamlined access through an easy-to-use interface designed for deployment via the Internet or through an organisation's intranet.

Like Jayne and Sam, you'll see the benefits straight away by knowing *where* to find what's important to you.

Location Intelligence via the Web

More than 80 percent of corporate data refers to events or objects associated with a specific location. Dekho utilises the geographic relationships within corporate information to seamlessly integrate multiple and otherwise unrelated business databases.

By using the power of location intelligence, Dekho gives users an unparalleled level of data integration, visualisation and analysis.

User Friendly Access

With a modern interface, Dekho delivers easy access to users, whether they are employees,

customers or the public. Dekho can be used within any standard operating environment, or with a number of different Internet browsers – particularly important for public access to information.

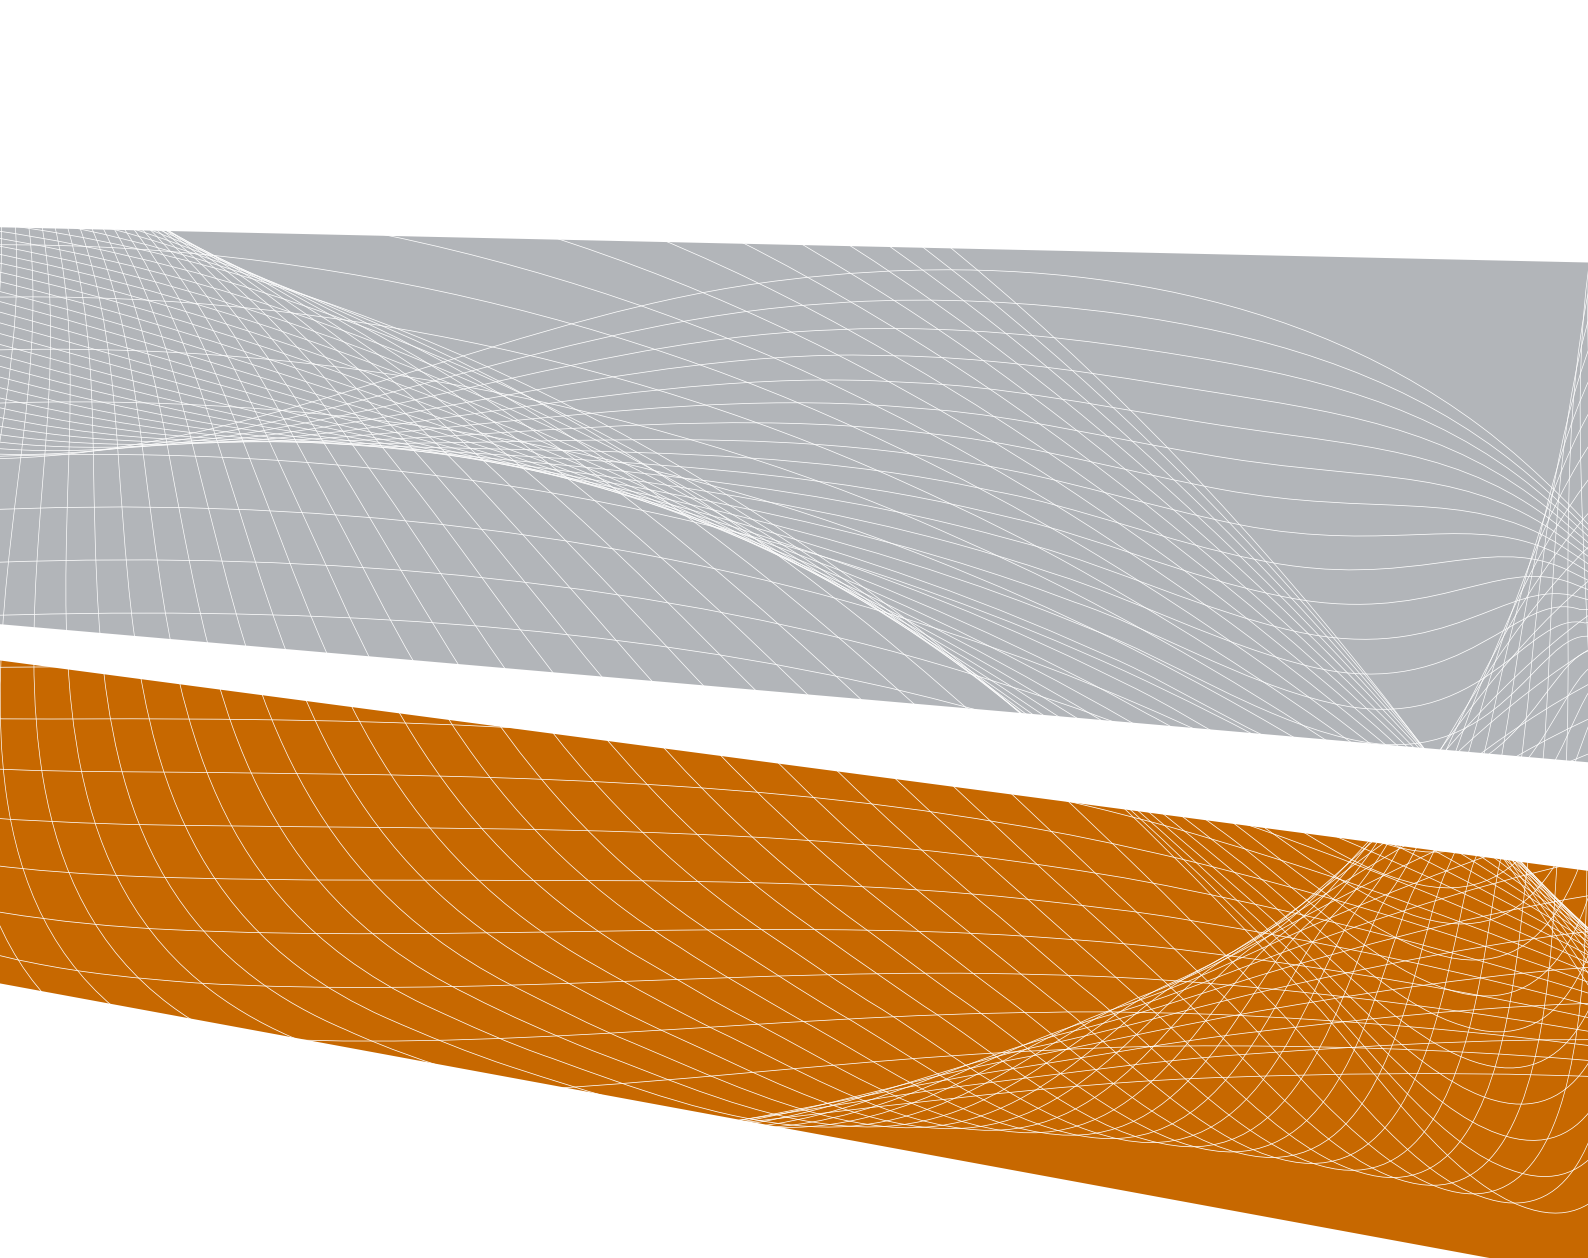

Web-based Delivery

Using free web browsers as the interface, Dekho delivers live, central data dissemination, ensuring only accurate and timely information is accessed. When served over an intranet, Dekho offers the benefits of a web application, but works like a local application, allowing staff to interact with information without streaming large amounts of data. Staff can also edit the data, adding another level of interaction with an organisation's

ESRI Australia

Putting knowledge into place

corporate data, but within a secure environment controlled by you.

Seamless Integration

Dekho delivers access to information without the need for multiple searches, or knowledge of where information resides. Externally, customers or the general public can find all the information they need, when they want it.

Easy Customisation and Administration

Centrally-managed and simple to implement, Dekho's open and extensible architecture means that organisations have the power to customise the interface as their needs change, and

configure individual requirements such as standard queries, reports and print layouts.

Access to Dekho can be controlled internally, limiting data and functionality access at your discretion. Business units throughout the organisation can also be catered for and provided with a tailored set of controls, such as access to complete planning information for the planning department.

Tailoring Your Solution

Dekho is available in a number of options to suit your requirements. From Dekho Workflow - designed for integration with web-based workflow applications such as e-commerce applications,

to Dekho Enterprise Standard – which enables the integration to corporate databases and web services, Dekho has the solution that fits your needs.

Third Party Integration

To enable sophisticated analysis and querying with other corporate enterprise systems, a number of application integration interfaces have been developed. These interfaces enable users to access the user interface of third party systems with a single button click.

About ESRI Australia

ESRI Australia is the source of astute professional services and Geographic Information Systems (GIS) technology.

We're experts in location intelligence, with over 30 years experience in implementing GIS solutions in dozens of different industries.

Our unique combination of quality services underpinned by our proven KnowledgeWhere™ methodology, and world-leading ESRI GIS technology, means significant advantage for our clients.

Our passion for technology and considered approach gives our clients the power to see more and do more. With our expertise, knowledge, vision and technical capability, ESRI Australia turns 'possibility' into 'reality'.
