Special Achievement in GIS Award Presented to City of Greater Geelong

The City of Greater Geelong was presented with the Special Achievement in GIS (SAG) Award for Australia at ESRI Australia's recent national client conference, OZRI 2007.

The SAG Award was presented to the City of Greater Geelong for their innovative asset inspection system, which was designed to meet both current and future asset maintenance requirements. The system was developed in response to the enhanced reporting and other requirements of the Victorian Road Management Act.

The asset inspection system integrates with the council's existing well established customer service, asset management and spatial information systems, enabling both proactive and reactive maintenance to be managed through the one system.

A number of benefits have been achieved by the City of Greater Geelong since the implementation of the system. These benefits have included: a single system with traceable workflow; all information available on-line to all staff; higher levels of service with more equitable sharing of resources; and the availability of data to support analysis of levels of customer service and asset maintenance performance.
